More than a Travel-Lift...

MANTILIFT is the next generation of rubber-tyred cranes, combining the proven capabilities of a traditional Travel Lift with exclusive operational features that set it apart.

This unique combination makes MANTILIFT an exceptionally versatile machine, capable of operating efficiently even in the most demanding environments.

One of its distinctive advantages is its ability to safely handle the hauling and launching of sailing yachts.

Others imitate, we innovate...

MANTILIFT is a unique, patented solution. Thanks to its retractable longitudinal beams, it can perform all conventional boat hauling operations, even where no slipway is available. Once the boat has been lifted, the beams retract, transforming MANTILIFT into a conventional Travel Lift for storage and handling operations.

This innovative design ensures outstanding manoeuvrability, exceptional positioning accuracy, and uncompromising performance throughout every stage of operation.

Why Mantilift...

Less time, Lower costs.

MANTILIFT completely eliminates the need for costly civil engineering works and the administrative procedures required to build a dedicated slipway.

With MANTILIFT, the machine itself is all you need, no invasive infrastructure, no construction delays, and no unnecessary investment.

Pure versatility.

Thanks to its multifunctional design, MANTILIFT performs every stage of the handling process without requiring boat trailers or additional equipment for storage operations.

One machine is all it takes to meet a wide range of operational requirements with maximum efficiency.

One machine, Infinite possibilities.

MANTILIFT can operate on existing slipways while also enabling launching and hauling operations from multiple locations throughout the marina. This flexibility significantly reduces transfer times and storage operations by eliminating the need for long journeys to dedicated haul-out or storage areas, improving overall productivity.
